Secretly monitor desired PC of user from server

This is a superb spying software that runs in the background. Administrator can monitor and control each activity of single or multiple clients without their knowledge. And even it allows full day recording of any client's PC server

FOLDER SYNCHRONIZATION

Being a part of the tech-savvy world every user wants to keep its files and folders readily available all the time. This feature dose exactly the same by allowing the administrator or the client to synchronize a single file/folder or a number of files/folders of a particular computer to their own PCs.

The screenshot shows the 'File/Folder Synchronization' application window. At the top, there is a dropdown menu for 'S118' and an IP address field 'IP:192.168.2.128'. A 'Back' button and the 'FC SPY' logo are in the top right. Below this, there are fields for 'Set sync interval(hh:mm): 00:01' and 'Set sync loction: Browse CA\Users\s118\Desktop'. There are 'Add', 'Delete', and 'Save' buttons. A table with the following columns is visible: S.N., Select, Full Path, SyncSubFolders, and Enable.

S.N.	Select	Full Path	SyncSubFolders	Enable
1	<input type="checkbox"/>	D:\	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

The Windows taskbar at the bottom shows several open applications: Windows Explorer, Internet Explorer, Google Chrome (Download Details...), File/Folder Synch..., Messenger, TeamViewer, and PCSpy-ppt [Com...]. The system tray shows the time as 1:46 PM on 10/02/2017.

SYSTEM INFORMATION

Hardware Information: It includes the details about the hardware specifications of the client's PC.

Software Information: It enlists the software information of the client's system like what operating system is the PC running on, its RAM size, Hard disk space and other relevant info.

Changes Software: This module shows the detailed list of software that the client had recently installed/uninstalled on their respected PC.

Changes Hardware: It shows the list of hardware information which have been recently modified/changed.

PROTECT ANY FILE AND FOLDER

Safeguard the system's files/folders there by prohibiting user to have complete access unless permitted. It will block client to have access, modify or delete any file/folder.

HAVE A SECURE INTERNET ACCESS

Businesses often monitor their employee's computers for inappropriate activity. Employer can block specific web page, email windows, social networking sites or anything in order to ensure that there is no security breach, misconduct and illegitimate transfer of the intellectual property

On the home front, parents monitor children to help keep them safe

Spouses may also monitor computer activity to keep an eye out for excess spending or marital problems

So, want to block all users of a windows PC from opening certain websites regardless of the browser they use or the time of day, then our software has the complete solutions for your requirements.

Our software has the facility to allow or block any website's on client's system along with blocking of internet
